

# ACEC *Florida* 2026 OUTSTANDING PROJECT AWARDS

## NE 203<sup>rd</sup> Street Intersection Improvements, FDOT District 6

The NE 203rd Street Intersection Improvements project in Miami-Dade County, Florida enhanced safety and mobility by eliminating an at-grade crossing over the FEC Railway through the construction of elevated flyover ramps and a new pedestrian bridge. The project improved pedestrian connectivity and incorporated complex structural solutions including a widened complex steel plate girder bridge, heavily curved flyover ramps, and extensive utility and stakeholder coordination within a constrained urban corridor.
